März 2026

SAP TechEd

Agenda

Introduction

Exercise 1

- Start your development by creating an ABAP project in the SAP Build Code

Exercise 2

- Create a Shopping Cart business object, projection and service with the Graphical Modeler in SAP Build Code

Exercise 3

- Implement transactional behavior in ADT, create validations and determinations

Exercise 4

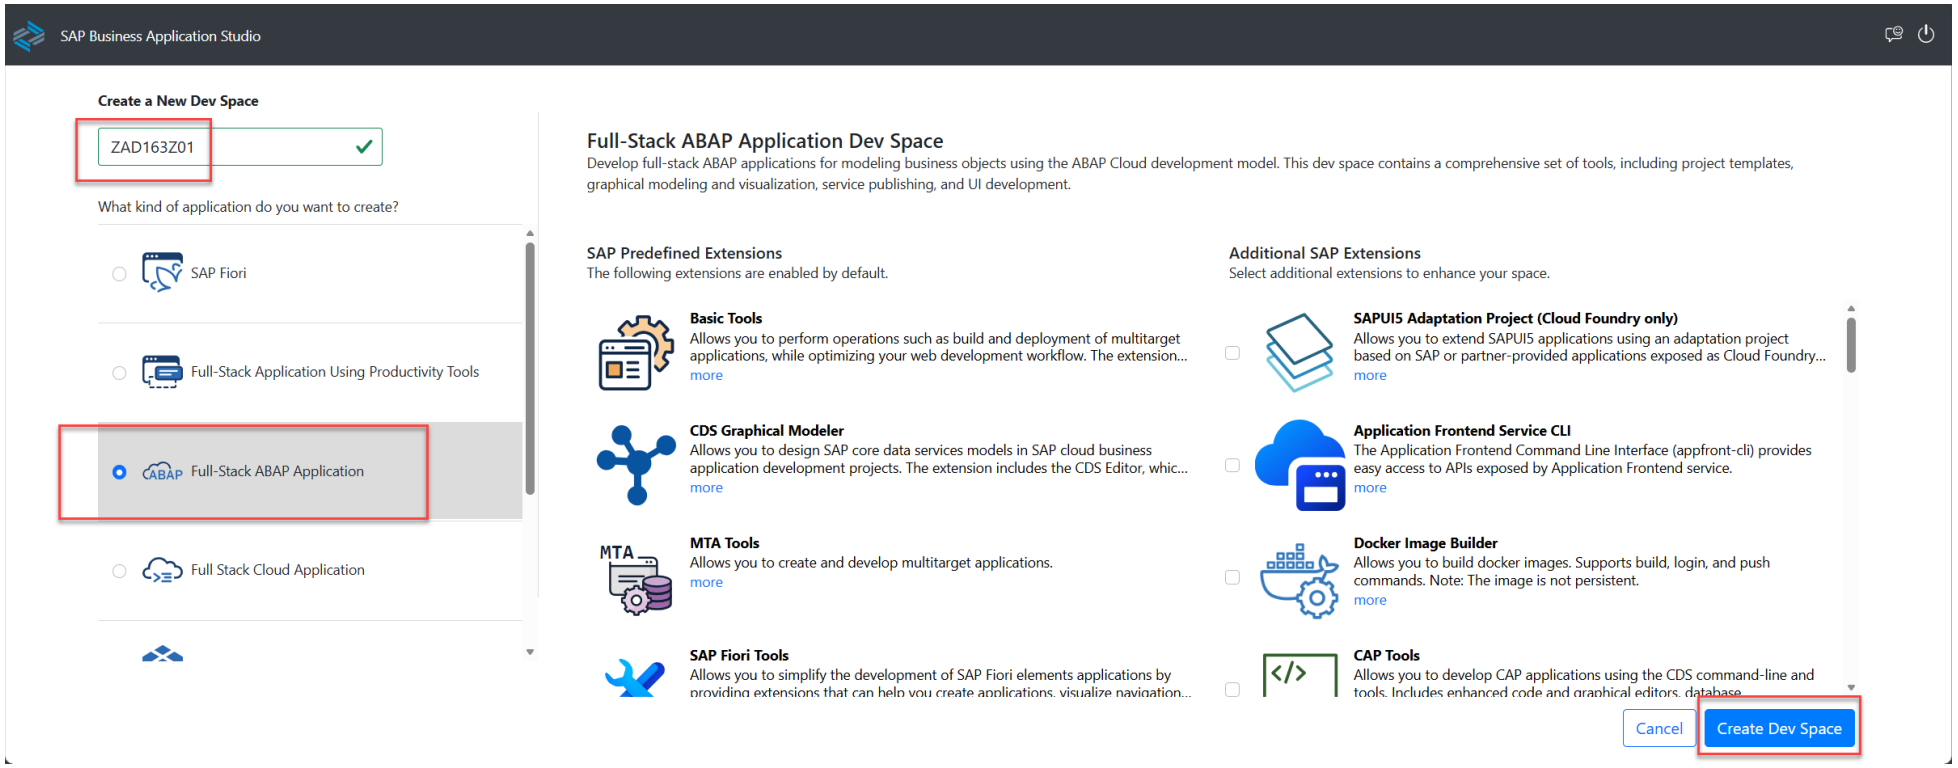
- Create, preview and adapt a SAP Fiori elements application

Get started

Introduction

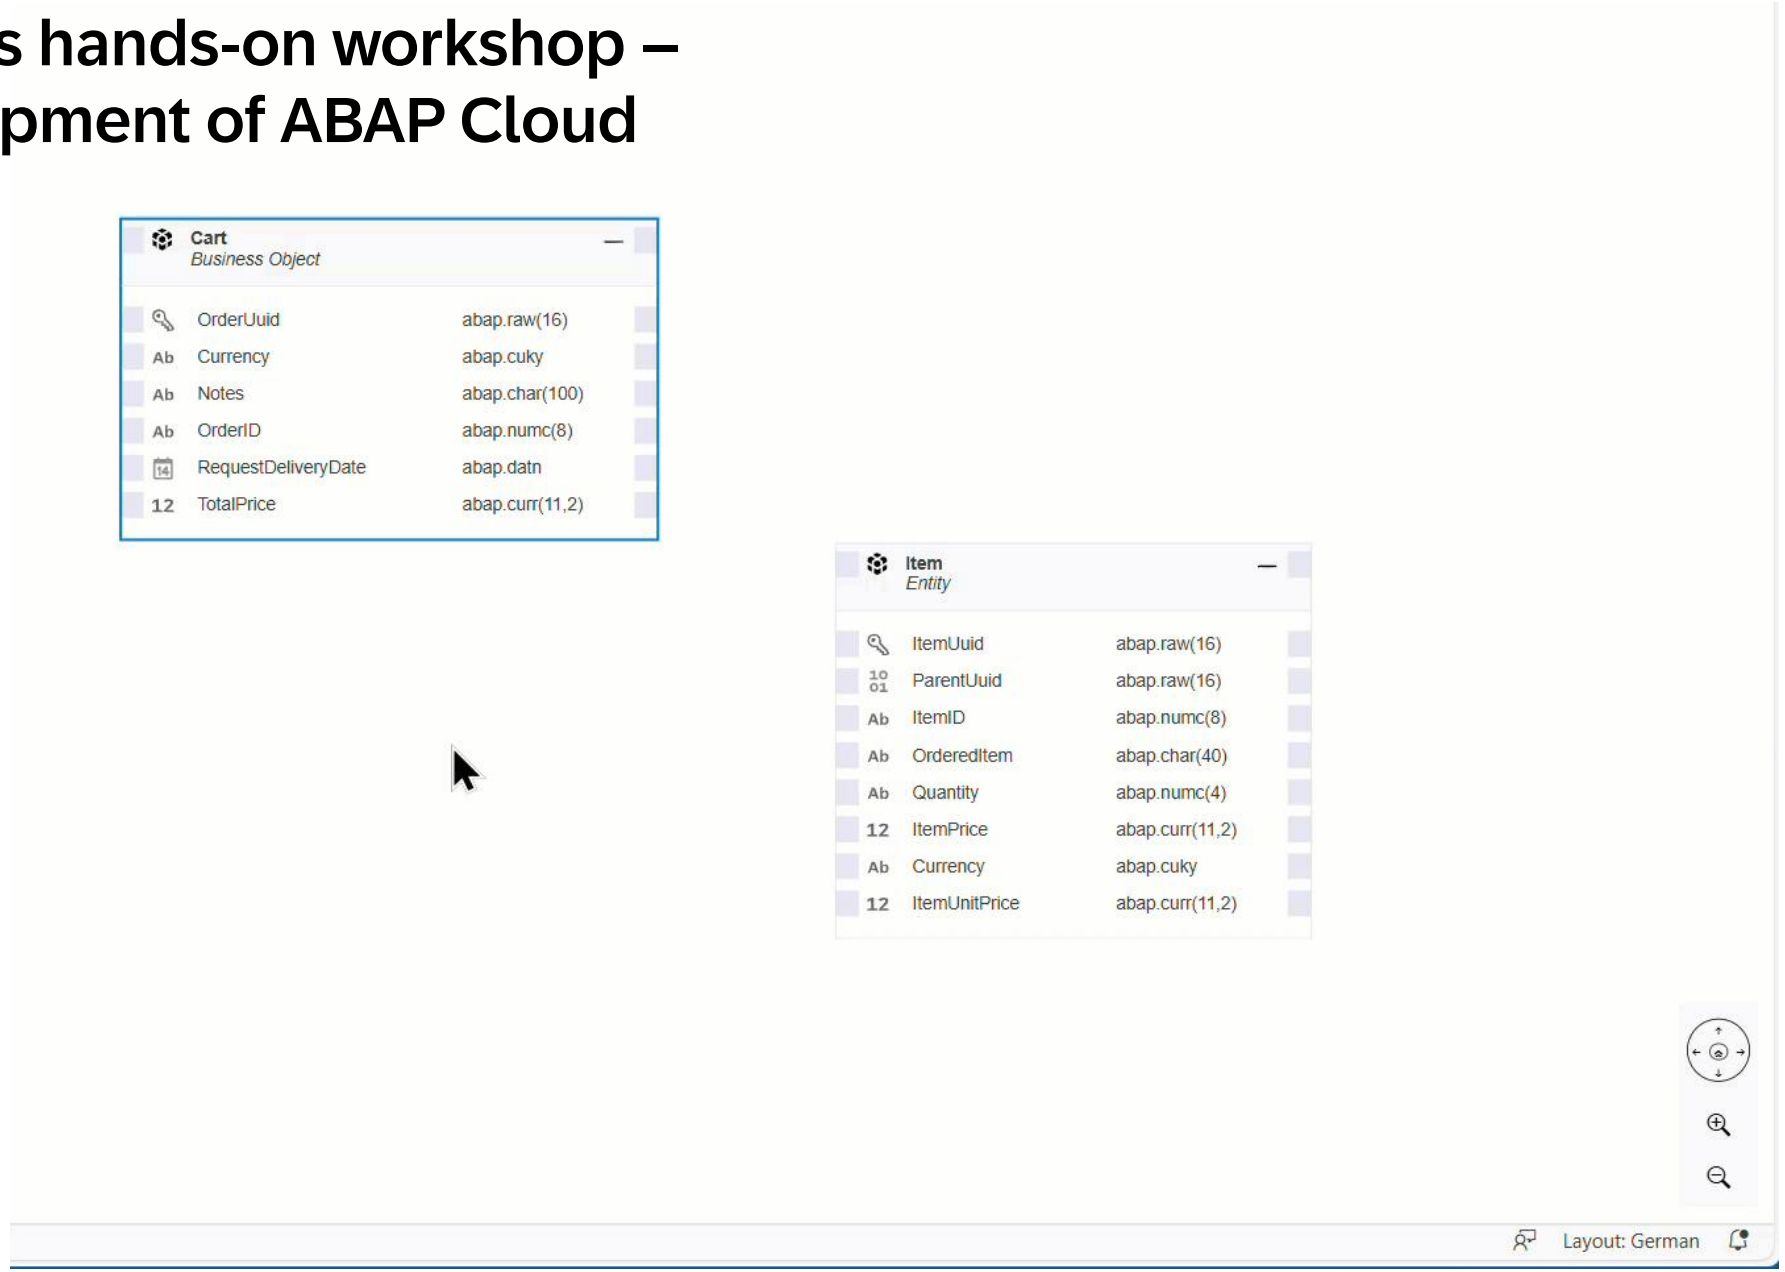
What you will do in this hands-on workshop – Practice fusion development of ABAP Cloud

1. SAP Build Code - Create a Full-Stack ABAP project (SAP Business Application Studio)



What you will do in this hands-on workshop – Practice fusion development of ABAP Cloud

1. SAP Build Code – Create a Full-Stack ABAP project (SAP Business Application Studio)
2. SAP Business Application Studio – Graphical Modeler



What you will do in this hands-on workshop – Practice fusion development of ABAP Cloud

1. SAP Build Code - Create a Full-Stack ABAP project (SAP Business Application Studio)
2. SAP Business Application Studio – Graphical Modeler
3. ABAP Development Tools - Implementation of Business Logic

```
36  validation validateRequestDeliveryDate on save { create; field RequestDeliveryDate; }

38  draft action Activate optimized;
39  draft action Discard;
40  draft action Edit;
41  draft action Resume;
42  //draft determine action Prepare;
43  draft determine action Prepare
44  {
45    validation validateRequestDeliveryDate;
    }
```

```
64
65  association _Items { create; with draft; }
66
67 }
```

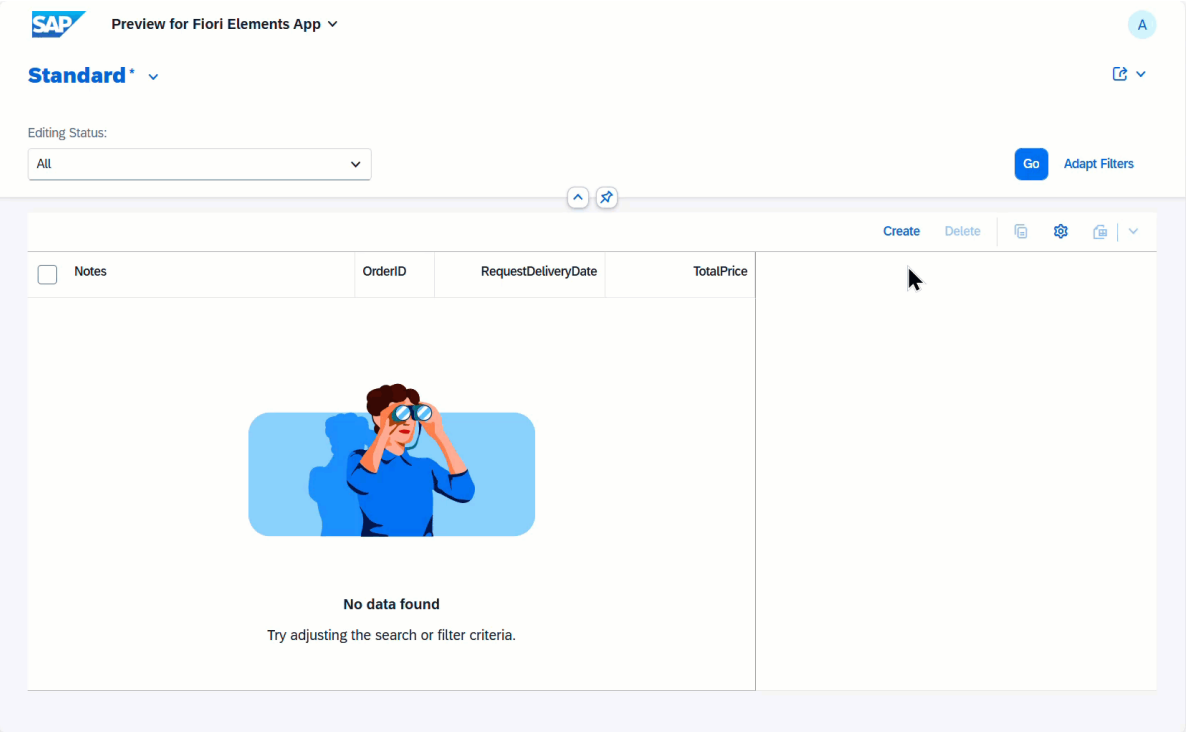
```
METHOD validateRequestDeliveryDate.

ENDMETHOD.
```

Predict RAP Business Logic

What you will do in this hands-on workshop – Practice fusion development of ABAP Cloud

1. SAP Build Code - Create a Full-Stack ABAP project (SAP Business Application Studio)
2. SAP Business Application Studio – Graphical Modeler
3. ABAP Development Tools - Implementation of Business Logic
4. SAP Busines Application Studio - Create, preview and adapt a SAP Fiori elements application



Exercise 1: Start your development by creating an ABAP project in the SAP Build Lobby

Exercise 1: Create a Full-Stack ABAP (SAP Business Application Studio) Project

Create a Full-Stack ABAP (SAP Business Application Studio) Project

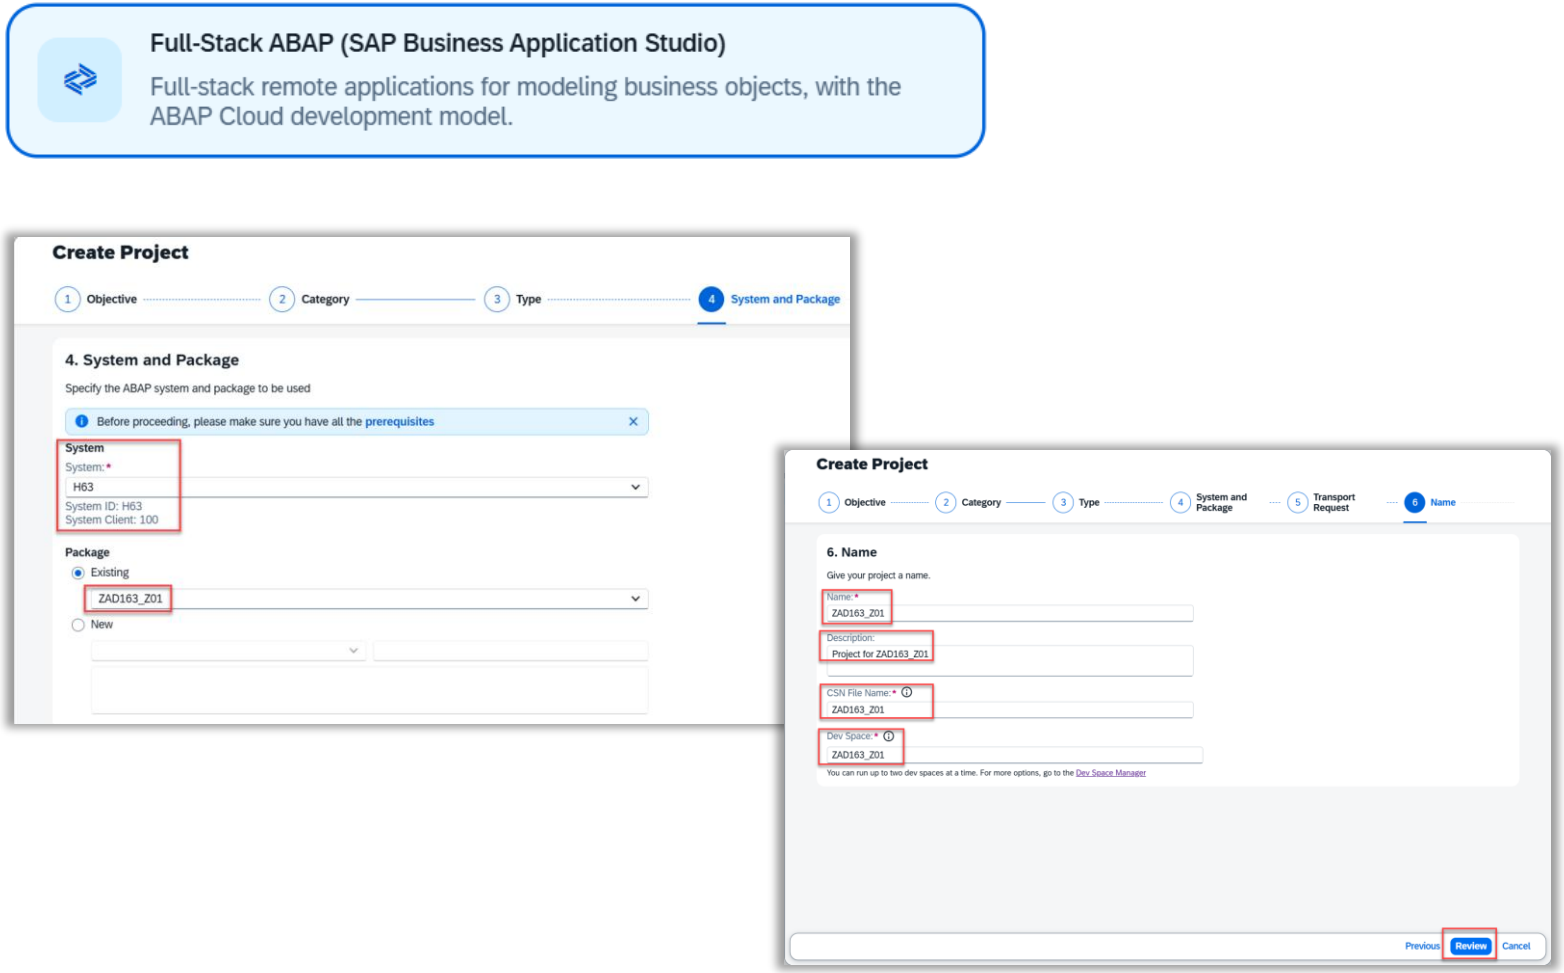
Connect to backend system

H63

Use a pre-created package

ZAD163-G##

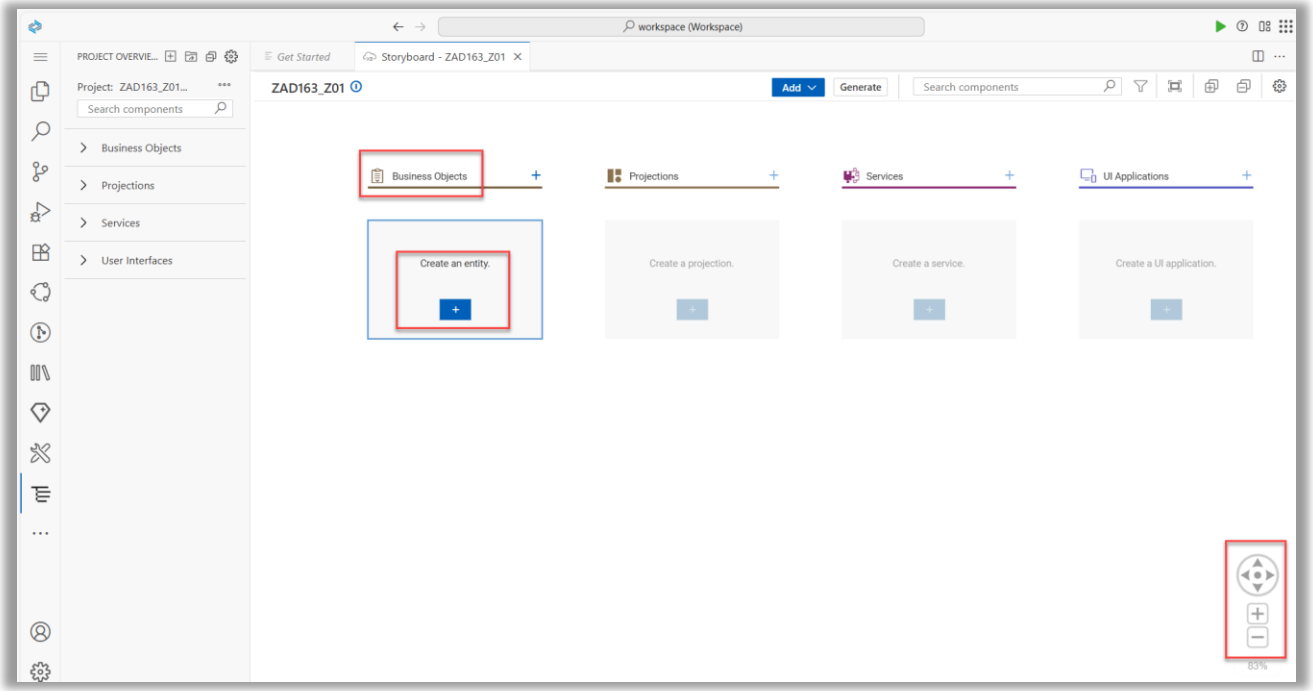
Create and start Dev Space in SAP Business Application Studio



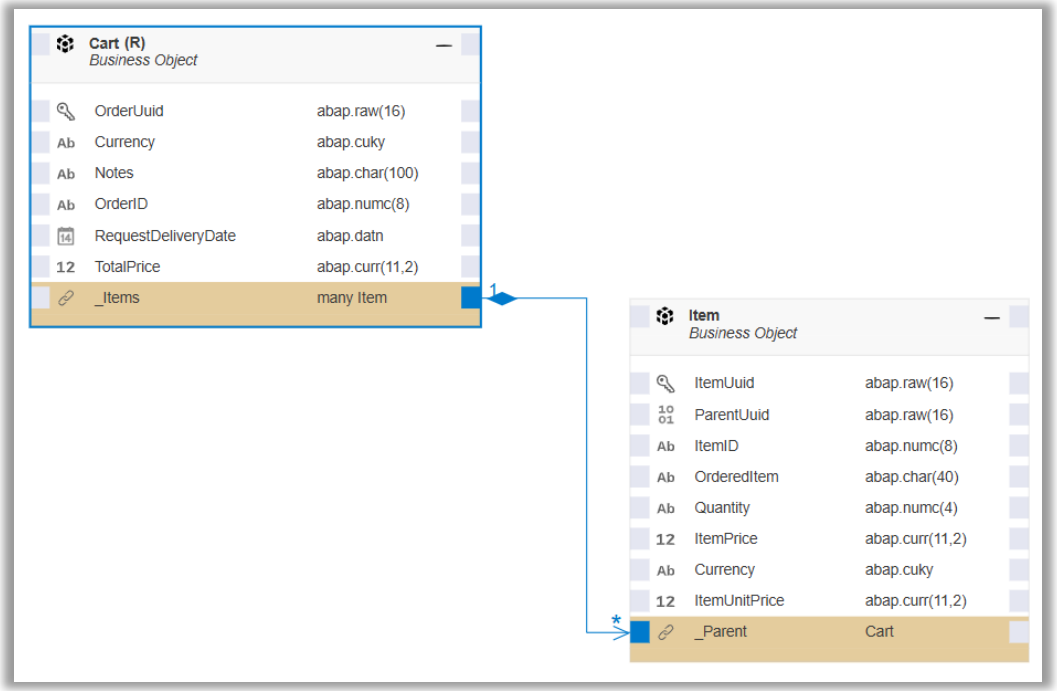
Exercise 2 :
Create a Shopping Cart business object, projection and service with the Graphical Modeler in SAP Build Code

Exercise 2: Model the ShoppingCart Business Object

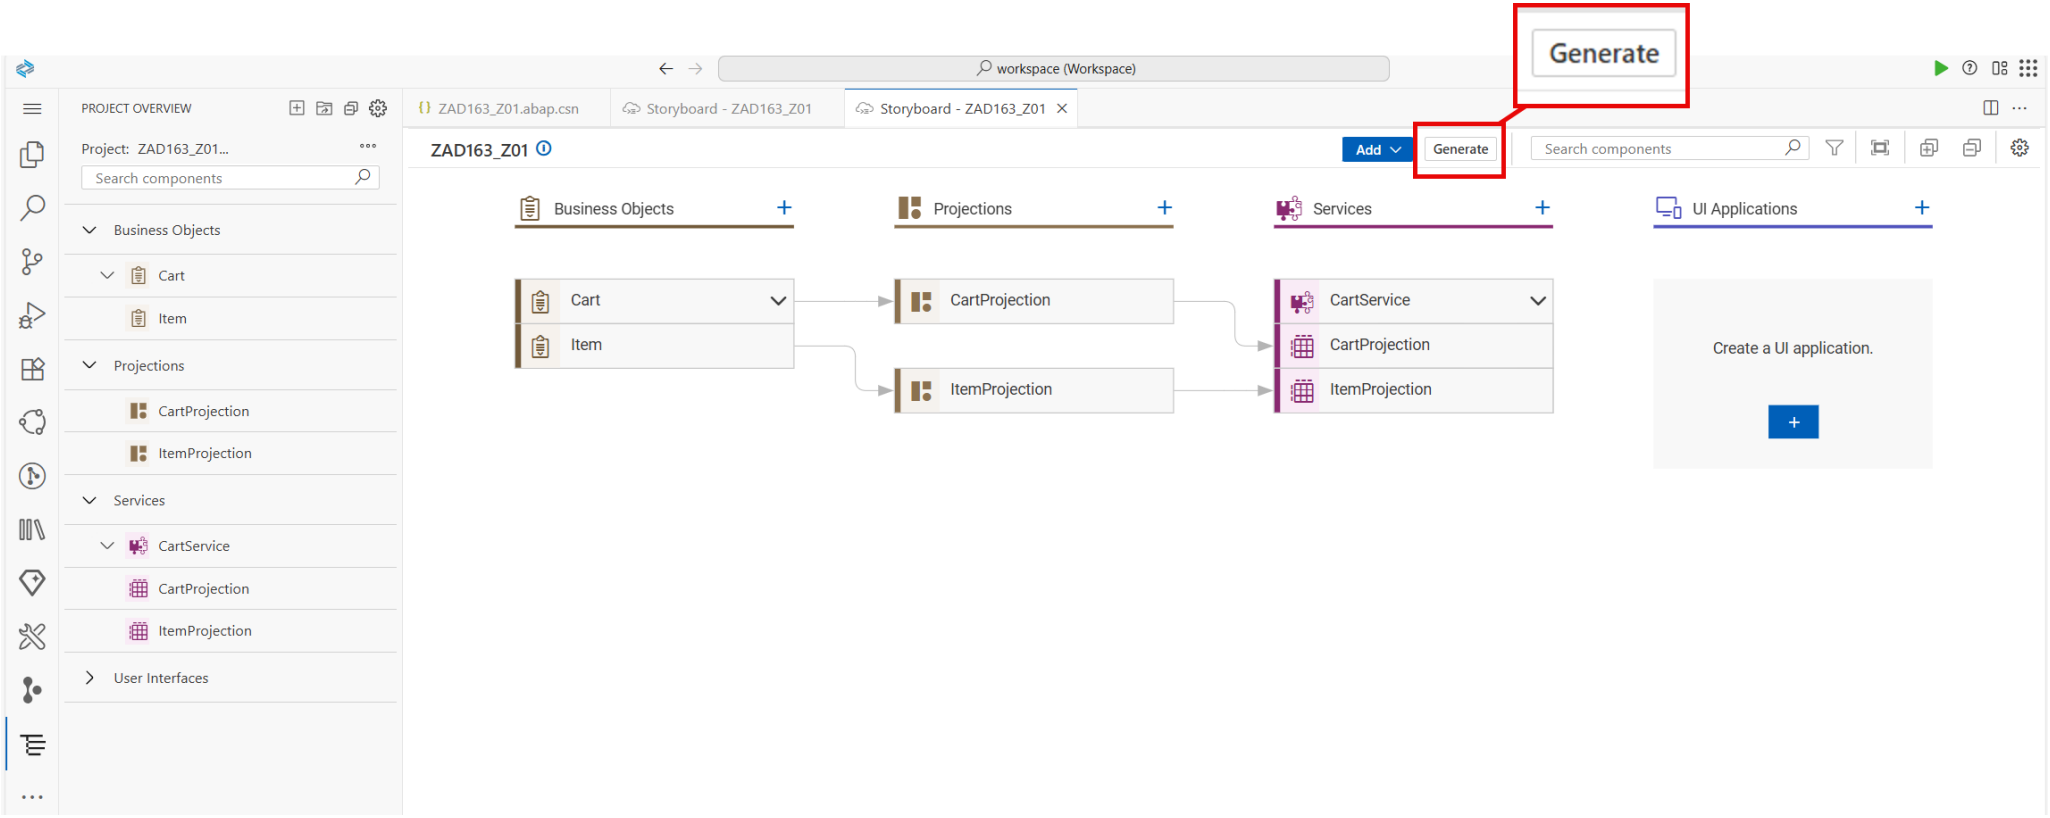
Storyboard



Graphical Modeller



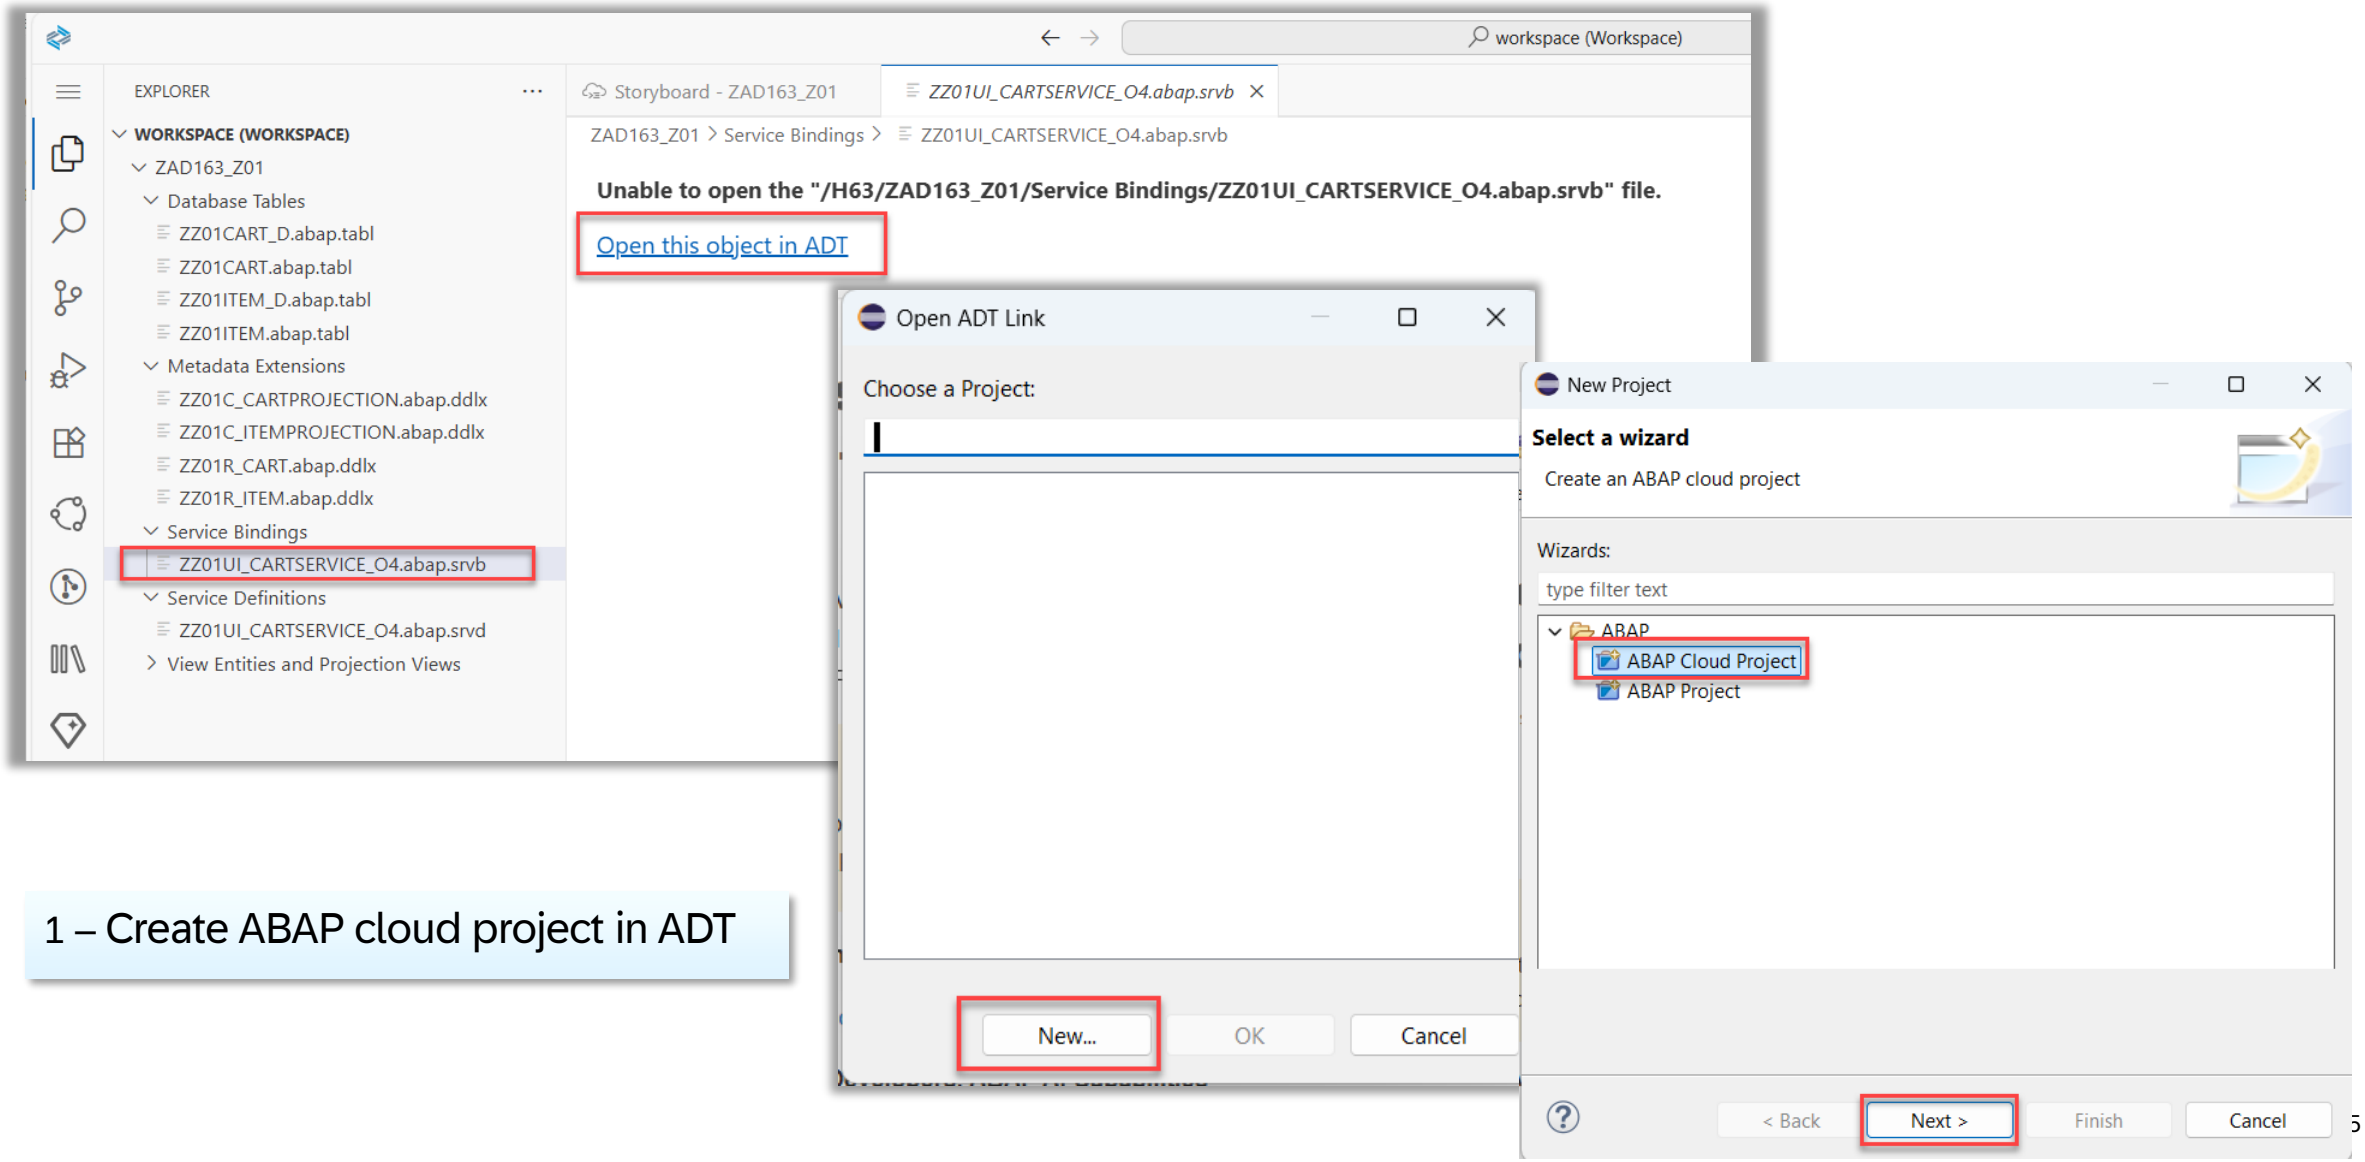
Exercise 2: Add Projection and Service Layer, Generate ABAP artefacts



Exercise 3:

Implement transactional behavior in ADT, create validations and determinations

Exercise 3: Create ABAP cloud project in ADT



1 – Create ABAP cloud project in ADT

Exercise 3: Implement determinations and validations using Joule

```
35
36  validation validateRequestDeliveryDate on save { create; field RequestDeliveryDate; }
37
38  draft action Activate optimized;
39  draft action Discard;
40  draft action Edit;
41  draft action Resume;
42  //draft determine action Prepare;
43  draft determine action Prepare
44  {
45    validation validateRequestDeliveryDate;
    }
```

```
64
65  association _Items { create; with draft; }
66
67 }
```

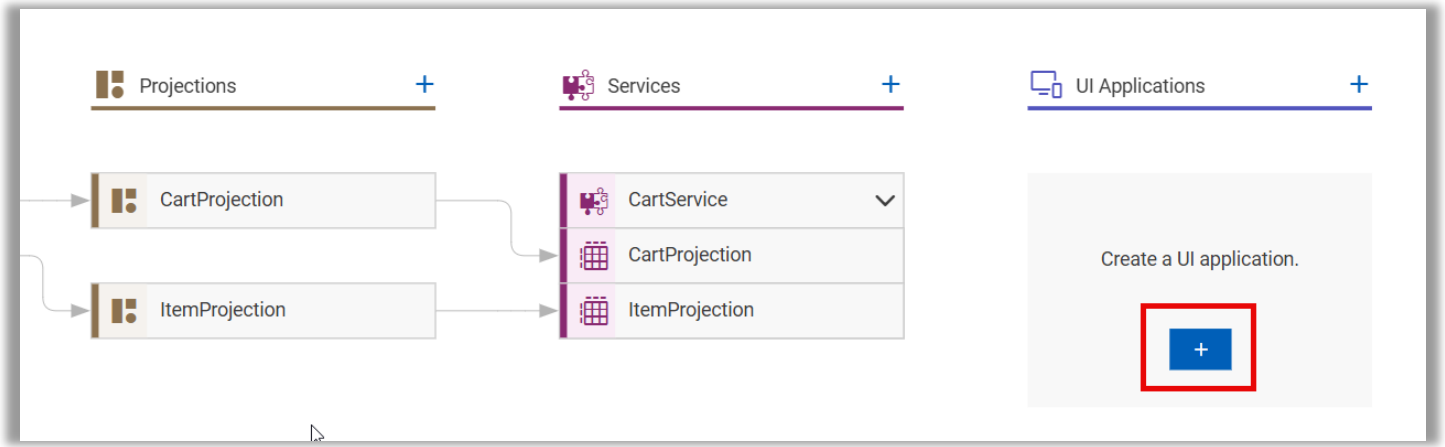
```
METHOD validateRequestDeliveryDate.

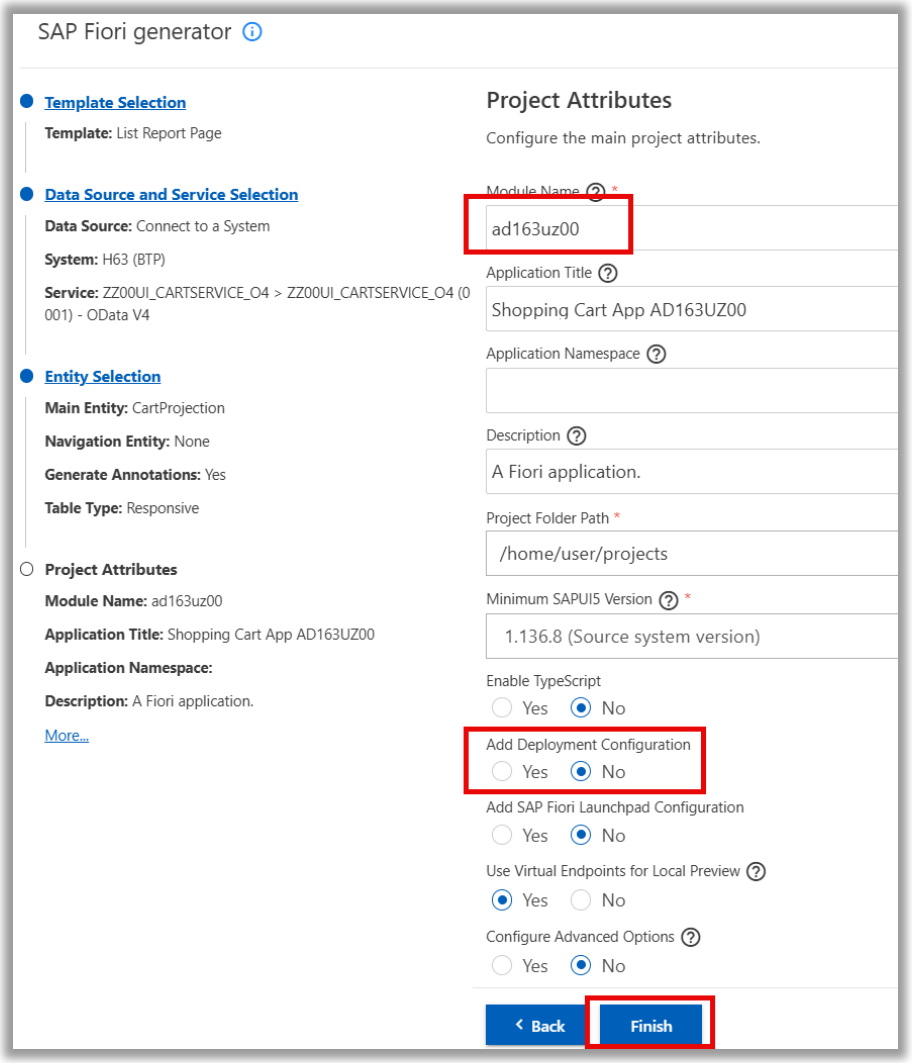
ENDMETHOD.
```

Predict RAP Business Logic

Exercise 4: Create, preview and adapt a SAP Fiori elements application

Exercise 4: Create, preview and adapt a SAP Fiori elements application





Exercise 4: Create, preview and adapt a SAP Fiori elements application
